A **DICTIONARY OF ARTS AND SCIENCES** in a compendious form, sufficiently copious without being prolix, accurate but not diffuse, divested of all superfluous matter, compressing rather than copying what has been done by others, and exhibiting a clear but concise view of the present state of the various branches of human knowledge, has long been a desirable object to English Readers and Students.

The following are the immediate Advantages which are promised to the Purchasers of this new Dictionary.

**FIRST, It exhibits a compendium of the actual present state of all human knowledge, the more laudable because cleared of all extraneous matter; rather practised than speculative; and in which particular attention has been paid to the most useful branches.**

**SECOND, It is of a convenient and comparatively portable size, calculated to fit on the table of every studious person, as a book of constant reference.**

**THIRD, It is printed so as to correspond with the quarto editions of Dr. Johnson's Dictionary; and the possession of both works thus have, in four quarto volumes, and at a moderate expense, all the literary and scientific aid which the English student or reader can possibly require.**

The English language has hitherto been without any popular view of Universal History. It will be immediately conceived by every attentive Judge, that Hume's is the most not satisfactory; that Voltaire, however may be his critic in other respects, is too prolix, unphilosophical, and arbitrary; and that the great English Universal History is either too confined, or too extensive than to be suited to the Abilities of the majority of the country to which it refers. The author of the present work has had reference to each of these objections, and has endeavoured to obviate them, as far as he could; and he trusts, that his work will meet a favourable reception as young persons, in particular, in fact, to circulating libraries, and in private collections, and in general, to all persons to whom the great Universal History, in story or in volumes, is either too voluminous, or too expensive.
